Making Accessibility Advocacy Part of Your Everyday Practice

Agile ORLANDO
JULY 24-28 **2023**

#AGILE2023

What to Expect today...

- Accessibility Advocacy is about making choices that lessen challenges for all users, including those with disabilities. It starts with shifting the conversation.

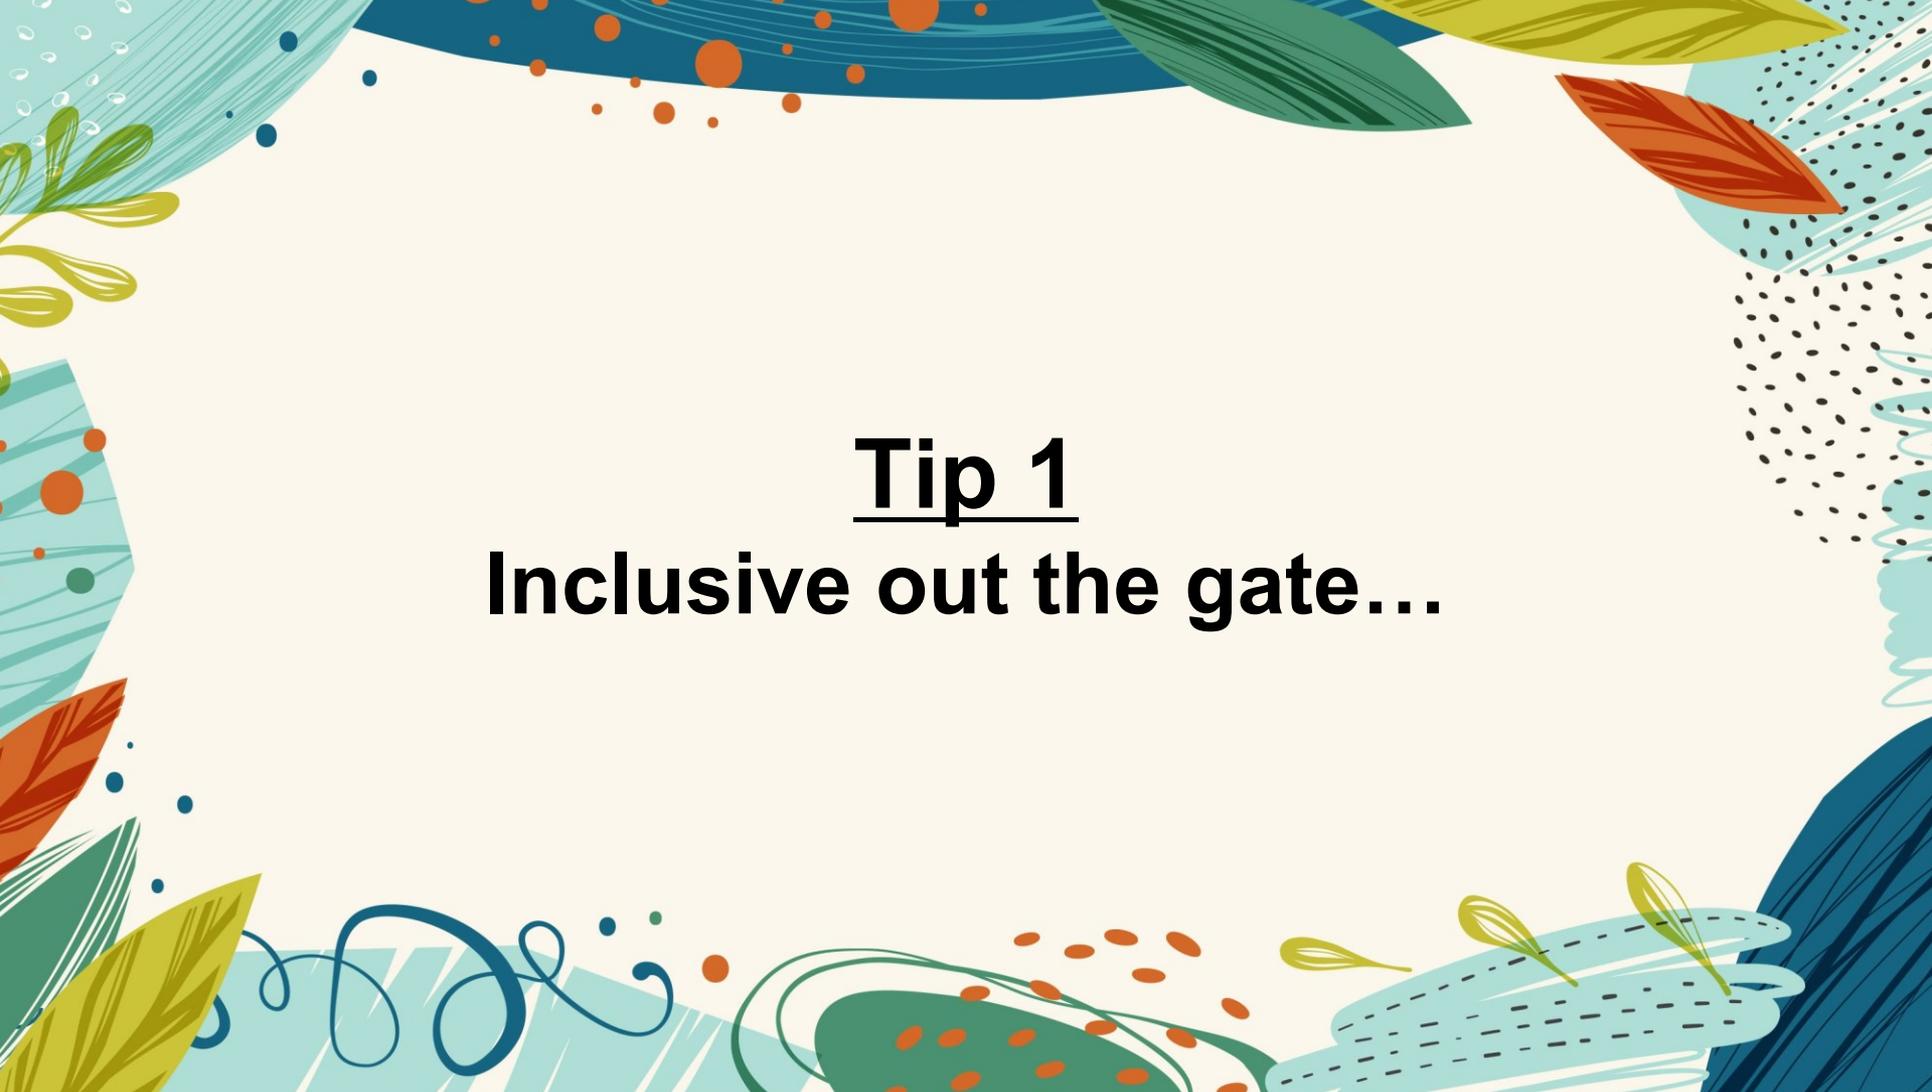

Outcomes:

- Share **some techniques** that can aid in addressing some common usability challenges
- Space **to practice** to increase effectiveness in addressing inclusiveness and overcoming roadblocks
- Reflect on art of the possible **'your next steps as an accessibility advocate'**

What comes to your mind, looking at this graphic?

	Permanent	Temporary	Situational
Touch	 One arm	 Arm injury	 New parent
See	 Blind	 Cataract	 Distracted driver
Hear	 Deaf	 Ear infection	 Bartender
Speak	 Non-verbal	 Laryngitis	 Heavy accent

A decorative border surrounds the central text, featuring various elements: green and yellow leaves, blue and orange circles, blue and green brushstrokes, and a pattern of black dots on a light blue background.

Tip 1
Inclusive out the gate...

Personas: Represent the user & helps teams

Basics. Include details that are both *relevant to the product and useful in helping teams remember the needs and motivations of the people using their product.*

Remember to ask yourself:

Who is the intended user base, and who do you want it to be?

What group(s) of people might you be overlooking?

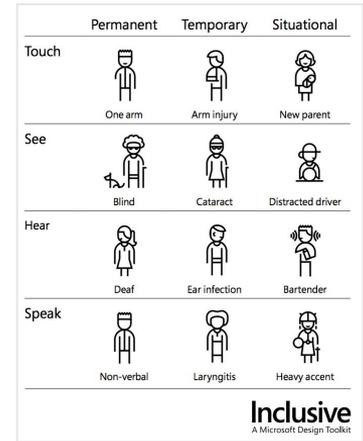

Persona Module. Capture the 'what else'.

Some teams create ck lists to add on to all their personas

CUSTOMER NAME	(Fictional)
Picture (Yes, draw it!) (Fictional)	Description
	Goals & Needs, Frustrations
Demographic info: Age: Occupation:	Tech Usage (web savvy, desktop, laptop, tablet, smart phone, favorite sites/apps...)

NAME: Sally

<p>Picture (Yes, draw it!)</p> 	<p>Description</p> <ul style="list-style-type: none"> - Married mother with one child in college, one at home - Is the primary care-giver to her mother, who has Alzheimer's • Family financial manager • Works 40 hours a week • She is social and outgoing; loves gardening <p>Goals, Needs, & Frustrations</p> <ul style="list-style-type: none"> - Finds it difficult to balance work, home, and taking care of her mother - Is always looking for a way to save time and money - Mom has different medical care providers, and it feels confusing
<p>Age: 55 Occupation: Accountant Former Military; Masters Degree</p>	<p>Tech Usage (web savvy, desktop, laptop, tablet, smart phone, favorite sites/apps...)</p> <ul style="list-style-type: none"> - Primarily uses her phone and iPad to browse the web and send email - Uses a laptop for work but not much use past MS Office tools - Would rather text than call; appreciates auto reminders

Quote "Make it easy for me, and you will have my loyalty."

Particular/s:

Sight: stigmatism that makes it hard to see small screens

Touch: Difficult to fill out forms on her mobile device

Paradox of Specificity

What is the Paradox of Specificity?

The Paradox of Specificity, is simply the idea that by adapting our efforts to the **needs of a more specific audience** will create solutions that are **useful to a much broader set of needs**.

The Rollaboard suitcase

Did you know?

The Rollaboard suitcase was invented by a pilot named Robert Plath

It was designed with just a tiny group in mind — **airline cabin crew** — and was inspired by his own experience of spending a lot of time moving around airplanes and airport terminals

Persona Spectrums ~ Shared Motivations

Are specific to human **motivations** and the way those motivations are shared across multiple groups. It shows how that motivation can change depending on context

Support Card Physical Context	Support Card Social Context	Support Card Temporary/Situational Limit	Support Card Economic barriers
<p>Different environments enable different capabilities, present different limitations, and have different rules and social norms.</p> <p>Here are a few examples for inspiration:</p> <div><p>At home</p><p>In the wilderness</p><p>In a library</p><p>In a car</p><p>In the city center</p><p>On the bus</p></div>	<p>Different social contexts come with different rules, behaviors, and social norms.</p> <p>Here are some examples of social contexts for inspiration:</p> <div><p>Alone</p><p>With coworkers</p><p>In a crowd</p><p>With friends and family</p></div>	<p>Disabilities are often temporary or situational. Use this card to pick which limitations apply to your scenario.</p> <div><p>Can't see</p><p>Can't speak</p><p>Can't hear</p><p>Can't touch</p></div>	<div><p>Solution under \$10 USD</p><p>No access to formal classroom or teacher</p><p>Minimal supplies/resources</p><p>Overcrowded classroom</p></div>

Set the stage for Exercise 1

Scenario

Your team has been hired to design and develop a website for a dentist office. The client already has a basic web site with information about the office such as contact information, hours, services offered, and bios on the dentists and dental assistants. ***The dentist office wants to provide the ability for patients to request appointments.***

- You have done some research on the users of dentist's system and want to build personas to help communicate information about the users to help the team.

Act 1 Exercise: Create some personas to share

Material & Directions

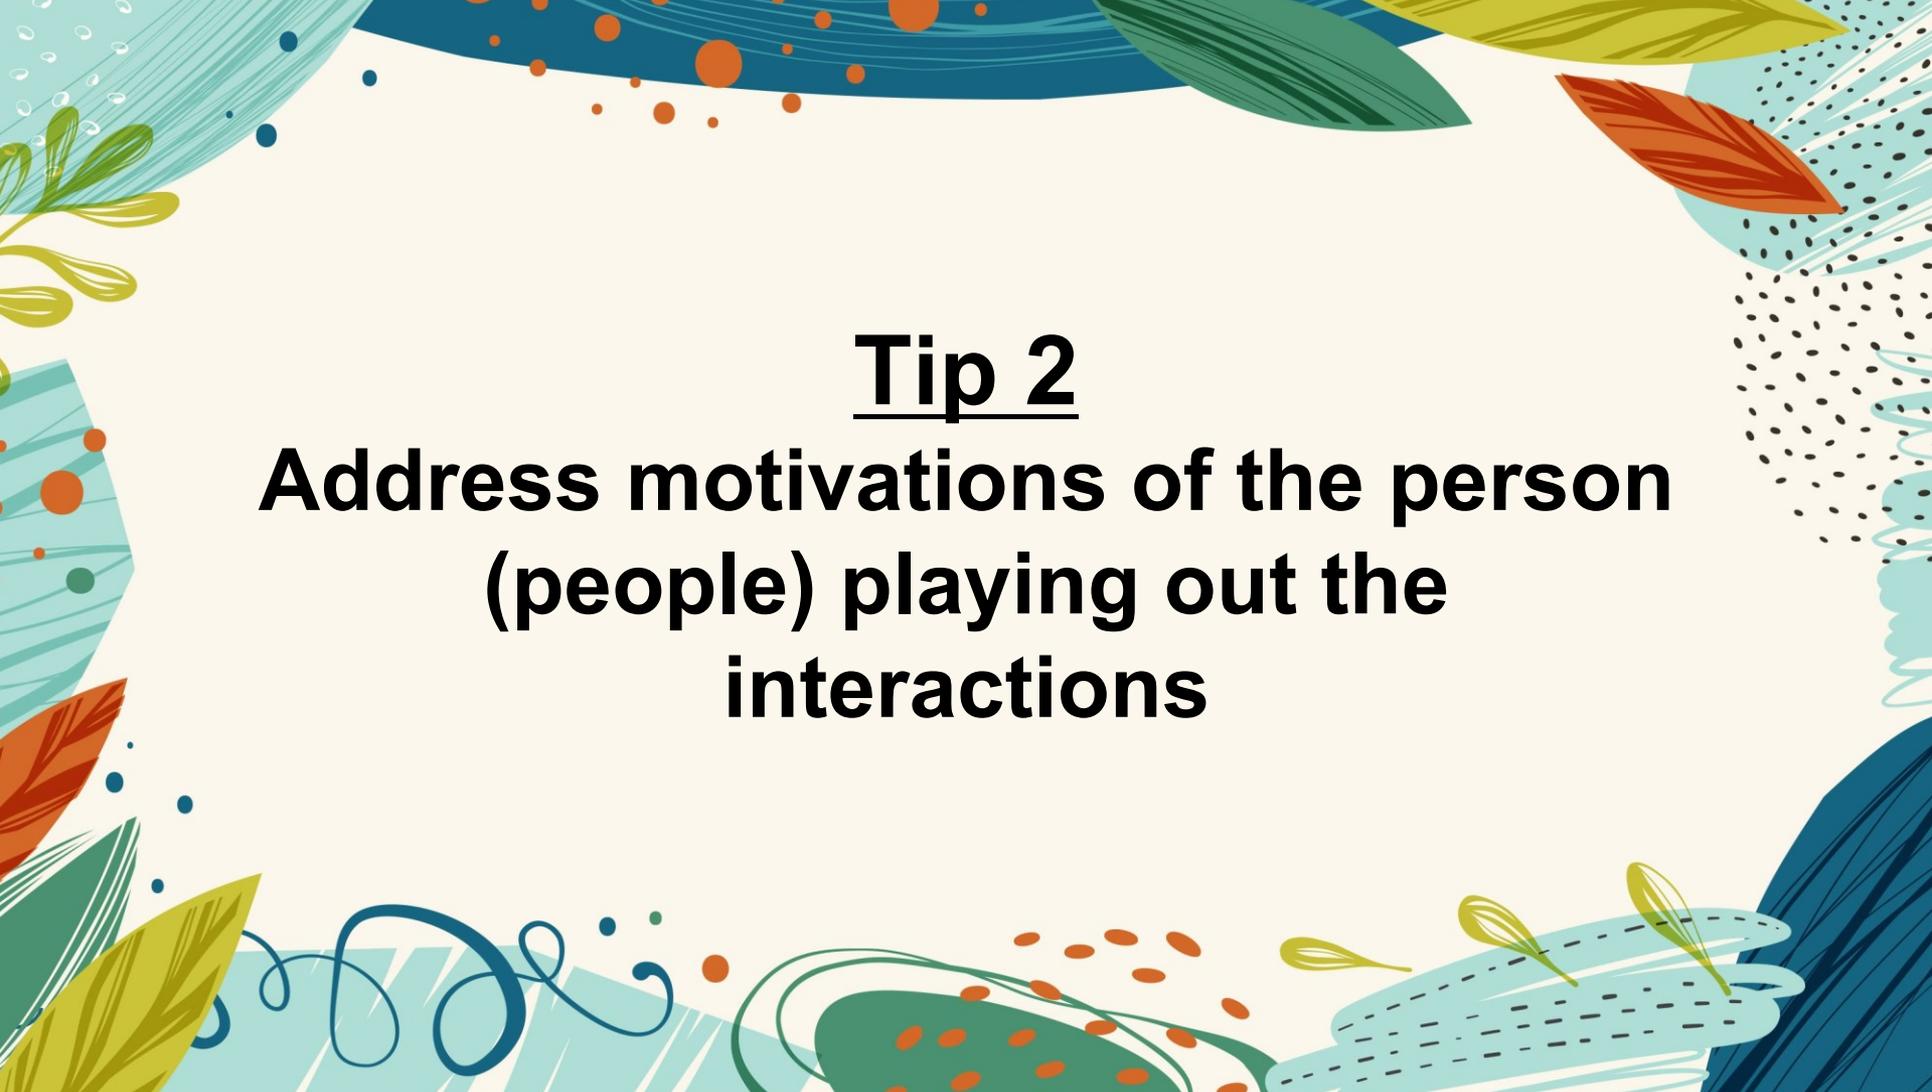

- Each table break into two or three teams
- See pages 5-7 in handout/guide for examples, directions
- Use any of the supplies at your disposal create a persona with at least one particular

- *We will check in at the 7-minute mark!*

Persona	
CUSTOMER NAME:	
Picture (Yes, draw it!)	Description
	Goals & Needs
Age: Gender: Occupation:	Tech Usage (web savvy, desktop, laptop, tablet, smart phone, favorite sites/apps...)

Source: <https://www.agilealliance.org/wp-content/uploads/2018/12/08.031.17-Agile-Playbook-2.1-v12-One-Per-Student.pdf> (Agile Playbook - Page 24)

The slide features a vibrant, abstract border composed of various elements: green and yellow leaves, blue and orange circular patterns, and light blue brushstroke-like shapes. The central text is set against a plain white background.

Tip 2

**Address motivations of the person
(people) playing out the
interactions**

Snapshot: User Stories

- **User stories** are short, simple descriptions of a solution that your team has come up with, told from the perspective of the **person who is playing out the interaction**. They are part of a larger epic that describes the actual problem to be solved and why you're solving it.
- The operative word here is *user*, meaning a user story puts **the focus on the user, not the product**.
- A user story usually focuses on three areas: As a (*who*) I want to (*what*) So that (*why*).
- This is all usually followed by **acceptance criteria**, which define how you know if the interaction is successful.

Snapshot: Behavior Driven Development (BDD) & the Gherkin format

Gherkin format: another way to develop user stories.

Provides a full scenario that help developers and testers understand both the outcome and the output of a particular user interaction. Steps are written in plain language. Then the developer will use these scenarios to implement the solution. The quality assurance (QA) team will write relevant automation scripts for each step.

Scenario — the behavior you're going to describe

Given — the beginning state of the scenario

When — a specific action that the user takes

Then — a testable outcome, usually caused by the action in **When**

And — this continues any of the other three operations if necessary

Set the stage for Exercise 2

Scenario

- **Your team has been hired** to design and develop a website for a dentist office. The client already has a basic web site with information about the office such as contact information, hours, services offered, and bios on the dentists and dental assistants. ***The dentist office wants to provide the ability for patients to request appointments.***

Set the Stage

- Your team has persona material to help you understand your users
- As a team write a couple user stories that are inclusive

Act 2: User Story Exercise

Materials

- Packets as reference
- Supplies on the table
- **Personas around the room**

Instructions

- Break out into your groups
- Reference the package as a team write a couple user stories (pages 10, 11). Focus on outcome/experience
- *We will ck in at 7-minute mark...*

User Story Template

Gherkin format
Gherkins are a way to add to user stories and give a full scenario that will help developers and testers understand both the outcome and the output of a particular user interaction

- Scenario — the behavior you're going to describe
- Given — the beginning state of the scenario
- When — a specific action that the user takes
- Then — a testable outcome, usually caused by the action in When
- And — this continues any of the other three operations if necessary

We now have a full picture of who is carrying out the specific action, and what the requirements are for the acceptance criteria, and the team knows what potential frustrations there might be so that they can ensure that the process flows more smoothly.

Other notes BDD scenarios:
Once the BDD scenarios are defined and steps are written in plain language as shown above, the developer can use these scenarios to implement the solution. The quality assurance (QA) team should take each step and write relevant automation scripts for each step. Using NoCodeBDD this automation can be achieved without any code and in minutes. Let's look at how automation is done in the next section.

Completed and what value specific persona/user capability), so that

met in order for the to be tested and verified. When the story is completed?

Tip 3
Trust and Verify
**Strive to prevent disability bias in
design/code**

Prevent Disability BIAS

By 2026 according to one Gartner study, scanning tools powered by visual AI will increase the identification of detectable accessibility issues to 80 to 90 percent, up from the current level of 40 to 60 percent.

According to Microsoft, the only way to prevent bias in AI is upfront design and development decisions

The most critical step in creating inclusive is to recognize where and how bias impacts the system during design, then continue to build test processes into how we work.

Trust and Verify, Some Tools available now....

Validation Software

- Total Validator
 - Site: <https://www.totalvalidator.com/>
 - Cost: Free to \$49 for Pro
- Web Accessibility Evaluation Tool (WAVE)
 - Site: <https://wave.webaim.org/>
 - Cost: Free

Screen Reader

- NVDA
 - Site: <https://www.nvaccess.org/>
 - Cost: Free

Color Blindness Simulators

- [Colblindor](#)
- [Pilestone](#)

A decorative border surrounds the text, featuring various elements: green and yellow leaves, blue and orange dots, a blue wavy line at the top, a red leaf on the right, a blue wavy line at the bottom, and a green leaf with orange dots at the bottom center. The background is white.

Tip 4
**Being an accessibility advocate
is a Mindset**

Quotes

"To so many people, [disability] remains a mystery, this very scary and overwhelming topic," ... "We don't talk about it. We ignore it. We shy away from it. We hide it away. But that's not what we should do when it comes to disability, because it's just something that's part of what makes people who they are." – *Emily Ladau*

"I've lived in this body a long time. I'm quite fond of it. It does the things that I need it to do, and I've learnt to use it to the best of it's capacity, just as you have." ...
"No amount of smiling turns a flight of stairs into a ramp." – *Stella Young*

Ladau, Emily. [*Demystifying Disability What to Know, What to Say, and How to Be an Ally*](#), Ten Speed Press, Emeryville, 2021

What Are you taking away?

Accessibility Advocate: Mind Map/Gallery

A decorative border surrounds the text, featuring stylized leaves in shades of green, yellow, and orange, along with blue and orange dots and abstract brushstrokes in blue and green.

Your feedback would be appreciated.
